# MyFuel+

## MAIN FUNCTIONS OF MYFUEL+

### FLEET MANAGEMENT SYSTEM

- > Flexible model either in-housed or outsourced that suits your business
- > Integrated system which reduces your operating costs
- > Tailor made for your business environment

### INVOICING REPORTING RISKS

- > Improve efficiency, productivity and transaction costs
- > 100% compliance with your government legislation
- > Manage any commercial advantages linked with the service

### FAST AND SECURE PAYMENT

- > 3DES security standard and the use of a PIN Code
- > Prepaid and postpaid mode possible
- > Manage risks: consumptions limits, hotlists and anomalies

### CLOUD STORAGE AND PROCESSING

- > Data storage on site or on cloud depending on business model
- > Report and statement generation
- > Integration with your information system, ERP, CRM...
- > Database management, clients, cards and stations.

### SMARTCARD

- > Manage card options and restrictions
- > Secure electronic payment
- > Store information for offline transactions
- > Cards secured by PIN code, diversified key per card

### POINT OF SALES (POS)

- > Card authentication, transactions recording, validations and acquiring payments from cards
- > Data transfer using GSM/GPRS or LAN/IP
- > Vehicle Tag management

### FRONT OFFICE

- > Cards/clients management and customisations
- > User rights management
- > Cards/clients hotlists management
- > Terminals, stations, dealers and products management
- > SMS alerts

### BACK OFFICE

- > Data processing
- > VAT and discount management
- > Statistics, statements and client risk management
- > Improved approach to data integrity control
- > Audit & manage system environment
- > Business Intelligence and analytical tools

### WEB

- > Accessible from any device - tablets, smartphones, laptops (Android, Windows, IOS)
- > Instant access to all user types (fleet manager, card holder, card manager, fuel station manager...)
- > Issue any request directly via the web interface
